No flood releases being made from Canyon Dam at this time

FORT WORTH, TX – The U.S. Army Corps of Engineers is not making any flood releases from Canyon Lake at the present time. The 150 cubic feet per second (cfs) being released is for the water supply customer, Guadalupe Blanco River Authority.

The plan of regulation calls for the Corps to make flood releases when channel capacity is available downstream. The primary control point for releases from Canyon Dam is the Guadalupe River at Gonzales at 12,000 cfs. There has been significant runoff from the local area below the dam so that the flow at Gonzales is greater than the control discharge.

The forecast is that several days will pass before the Corps can begin flood releases from Canyon Lake.
